Why Lablab

The **STEnCIL project** intends to promote the agricultural practice of the **Lablab** legume in order to restore and preserve the existing natural resources, improving the productive capacity of crops, reducing GHG emissions, decrease in the use of nitrogen fertilizers and other factors of production.

Objectives

To define the best Lablab varieties

To determine the best cultural practices according to the objectives of production.

To evaluate the productivity of Lablab in the socio-economic sphere according to the production objectives and the potential recipients.
